// WHAT WE DO

Our Services

Managed VAPT

Vulnerability Assessment and Penetration Testing combining automated tooling with expert manual analysis to simulate real-world attacks.

IT Audits

Full evaluation of systems, processes and infrastructure for security, efficiency and compliance with industry standards.

Security Awareness Training

Educating your team to recognise phishing, malware and social engineering, building a security-conscious culture.

GRC

Governance, Risk and Compliance brought into a single framework so risks are owned, decisions documented and audits predictable.

NESA Audits

Assessment against the UAE's national information assurance standards, with a prioritised path to compliance.

ISO 27001

The main rulebook for Information Security Management Systems. From gap analysis through to certification readiness.

// WHAT WE PROVIDE

Our Products

DMARC

Protects your domain from phishing and spoofing by verifying email authenticity, with detailed reporting.

Email Security

Defends accounts and communications against phishing, spam, malware and business email compromise.

Next-Gen Endpoint Security

AI-driven detection, behavioural analysis and real-time monitoring across laptops, desktops and servers.

Email Backup

Automated cloud-to-cloud backup for Microsoft 365 and Google Workspace with rapid restore.

Backup and Disaster Recovery

Automated backups and rapid recovery protecting against hardware failure, cyberattack and disaster.

Data Loss Prevention

Policies, encryption and monitoring that prevent unauthorised access, sharing or leakage of sensitive data.

Our Products (continued)

Privileged Access Management

Admin credentials vaulted, just-in-time access, and full session recording of privileged activity.

AI SIEM and SOC

Correlated monitoring with unlimited incident response and threat hunting, plus threat intelligence and brand takedowns.

AI Security for LLM Models

Defends against prompt injection, data leakage, model theft and Shadow AI across copilots and agents.

AI Endpoint Management

Automated patching, scripted remediation and policy enforcement across every managed device.

File Sanitization

Content Disarm and Reconstruction strips macros and hidden payloads, rebuilding clean, usable files.

AI Security for Agents

Runtime protection keeping autonomous agents inside their boundaries so they cannot go rogue or leak data.
